

The BRUNNER Assembly Crane

Good tools are the basis for economic creation in the trade.

Until 20 years ago, the tool box and the mortar box of a stove builder were still sufficient to put together tiles, heating door and fireclay mortar to form a stove. These were all small parts and easy to transport. Today heavy sometimes bulky fireplace inserts or boiler devices must be processed. If it is a logistical achievement to get these devices into the construction site, the final challenge is often to place 200 - 500 kg millimeter accurate on a kiln base without danger. For this last act, we now have a hand-operated assembly crane in cooperation with several craft companies. Designed for loads up to 750 kg, which is specially tailored to the needs of the construction site of a stove builder.

TÜV-tested according to the Machinery Directive 2006/42 / EG as well as DIN EN 13157.

This means not only a functional test but also load and overload tests, required stability as well as the consideration of ergonomic aspects with reasonable predictable use.

We offer you and your team a new rock-solid tool that reduces physical strain and its dangers. The design to 750 kg, therefore, to have enough safety reserves. The BMK 750 can be dismantled and can be carried in any Transporter. The pricing is based on the pure manufacturing costs plus the components used and their assembly.

New

BMK 750

Lifting capacity:	max. 750 kg
Net weight, total:	115 kg
Transport weight:	63 + 52 kg
Lifting height max.:	250 cm
Net sales price:	1.515,- €
